

Product Family Declaration

Family Name: WiFi Interface Development & Evaluation Series

Representative Model : RS485-WiFi-004 (RS485 Interface)

Product Type: Sub-assembly / Development Component (Not a finished product)

Core Hardware: Based on ESP32-C3-MINI-1-N4 module with 5V USB/Terminal power and integrated LDO.

Variants:

These models are sub-assemblies/development components intended for engineering evaluation only.

- Model **UART-WiFi-001:** UART interface development board.
- Model **SPI-WiFi-002:** SPI interface development board.
- Model **CAN-WiFi-003:** CAN 2.0B interface development board (TCAN3414).
- Model **RS485-WiFi-004:** Dual RS485 interface development board (SP3485).

Hardware Consistency & Compliance: All models in this series share the same PCB core layout, RF circuitry, Wi-Fi antenna, and power supply regulation (LM1117-3.3V). The only differences are the peripheral interface chips used for data evaluation.

All variants utilize the pre-certified RF module **FCC ID: 2AC7Z-ESP32C3MINI1**. No changes have been made to the RF characteristics. As development kits, these boards are **designed with the intent to comply** with the technical requirements of FCC Part 15B and ICES-003 Class B.
