

# Product Family Declaration

**Family Name:** WiFi Interface Development & Evaluation Series

**Representative Model :** CAN-WiFi-002 (CAN Interface)

**Product Type:** Communication Interface Component / Professional Integration Module.

**Core Hardware:** Based on ESP32-C3-MINI-1-N4 module with 5V USB/Terminal power and integrated LDO.

**Product Series Classification & Intended Use:**

The models listed below constitute a cohesive product family of industrial-grade communication interface adapters. Each model is specifically designed to facilitate professional industrial communication and seamless system integration for data acquisition and protocol conversion.

- Model **RS485-WiFi-004:** Dual RS485 interface development board (SP3485).
- Model **CAN-WiFi-003:** CAN 2.0B interface development board (TCAN3414).
- Model **SPI-WiFi-002:** SPI interface development board.
- Model **UART-WiFi-001:** UART interface development board.

**Hardware Consistency & Compliance:** All models in this series share the same integrated PCB core layout, RF circuitry, Wi-Fi antenna system, and regulated power supply management (utilizing LM1117-3.3V). The distinct model numbers represent specific peripheral interface configurations optimized for different industrial data protocols. All variants are built upon the pre-certified radio module **FCC ID: 2AC7Z-ESP32C3MINI1**, and no modifications have been implemented to the module's RF characteristics or output power. The entire product family is engineered to maintain full compliance with the technical standards of **FCC Part 15 Subpart B** and **ISED Canada ICES-003 Issue 7**.

**Compliance Summary:** "This product family consists of industrial protocol converters that utilize the pre-certified radio module FCC ID: 2AC7Z-ESP32C3MINI1. All models share the same RF and power circuitry. Please refer to the attached SDoC and Product Family Declaration for detailed compliance information."
